#### General

System

Preamplifier section: Low-noise high gain NFB type equalizer amplifier, passive type direct tone control

Power amplifier section: Pure-complementary SEPP MOS-FET power amplifier

Power requirement

Models for European countries: 220 V - 230 V AC, 50/60 Hz

Power consumption

Model for Scandinavian countries, Switzerland, Spain and

Portugal 180 W

Model for other European countries

240 W

Dimensions

Approx. 430 x 150 x 375 mm (w/h/d)

(17 x 5 <sup>7</sup>/<sub>8</sub> x 14 <sup>3</sup>/<sub>4</sub> inches)

Approx. 14 kg (30 lb 14 oz)

Supplied accessories

Screws (4)

The above values are measured at 230 V AC.

Design and specifications are subject to change without notice.

This appliance conforms with EEC Directive 87/308/EEC regarding interference suppression.

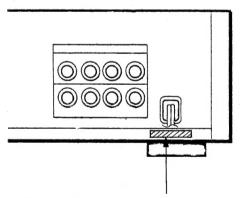

#### Note:

There are two types of power transformer (T901) in German model. When ordering the power transformer, check the part No. of it.

#### SAFETY-RELATED COMPONENT WARNING!!

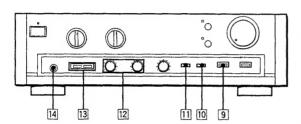

COMPONENTS IDENTIFIED BY MARK A OR DOTTED LINE WITH MARK A ON THE SCHEMATIC DIAGRAMS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUB-LISHED BY SONY.

### SECTION 1 **GENERAL**

### Identifying the Parts and Controls

#### This section is extracted from instruction manual.

#### **Front Panel**

**I**POWER switch and indicator After the power is turned on, the standby indicator lights in red as the built-in muting circuit activates. When the amplifier stays in a stable operating condition, the indicator lights in green. The indicator lights in red if the unit

detects shorting of circuit of the speaker outputs or in case of short-circuit of the inputs of DC components. In such a case, disconnect the power source and check the connected components and speaker systems.

#### 2 INPUT SELECTOR

Selects the desired program source for

3 SOURCE DIRECT button and indicator When the button is pressed, the orange indicator lights and the circuits of the TONE control, SUBSONIC filter button, BALANCE control and MODE selector are disengaged regardless of the setting of the switches.

4 MUTING button and indicator Press the button to reduce the sound level by -20 dB. (Output voltage becomes 1/10.) Generally, set the button to off.

#### 5 ATTENUATOR control

Adjusts the sound level. To increase the sound level, turn the control clockwise. To decrease the level, turn the control counterclockwise.

#### Note

Turn down the sound level before switching on the unit.

This prevents damage to speakers.

#### **6** CARTRIDGE selector

Set the selector according to your

MM: For moving-magnet type cartridge. MC: For moving-coil type cartridge.

#### 17 REC OUT SELECTOR

Selects the program source sent to the REC OUT jacks for recording.

#### 8 BALANCE control

Adjust BALANCE to correct stereo imaging, when the speaker position is not symmetrical.

9 DIRECT INPUT selector Set to SOURCE to select program source with the INPUT SELECTOR. To listen to a program source processed through the equipment, such as graphic equalizer, connected to the ADAPTOR jacks, set it to SOURCE,

To listen to a program source connected to DIRECT IN jacks, set it to DIRECT.

#### 10 SUBSONIC filter button

If subsonic noise components created by warped records, etc. are present, the audible range frequencies may be modulated and cause irritating intermodulation distortion. In this case, press the button to reduce noise components of less than 15 Hz, which cause modulation noise.

MODE selector STEREO: For listening to a stereo MONO: For listening to a monaural

program.

### 12 BASS and TREBLE TONE controls

Adjust the tone quality.
To increase bass or treble sound, turn the control clockwise. To decrease them, turn the control counterclockwise.

#### 3 SPEAKERS buttons

Select speaker system A, B, or A and B. To drive speaker system A: Press A button.

To drive speaker system B: Press B

To drive speaker system A and B: Press both A and B.

For headphones listening only: Press both A and B to OFF (1).

#### 14 HEADPHONES jack

Connect the stereo phone plug of headphones.

# SECTION 2 ELECTRICAL ADJUSTMENTS

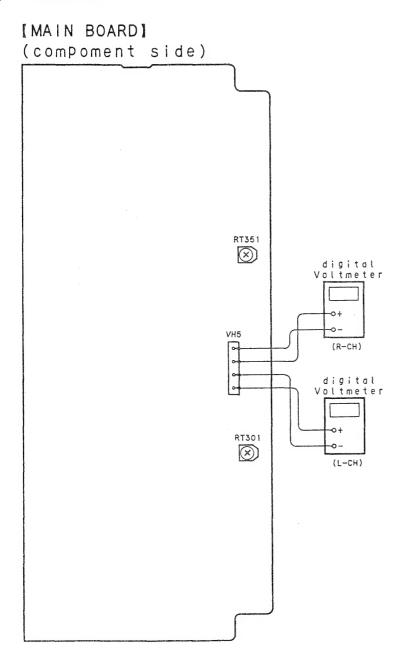

#### Bias Adjustment

Note: Adjust the idling after tuning the unit on for about 10 minutes, giving it time to warm up.

#### Procedure:

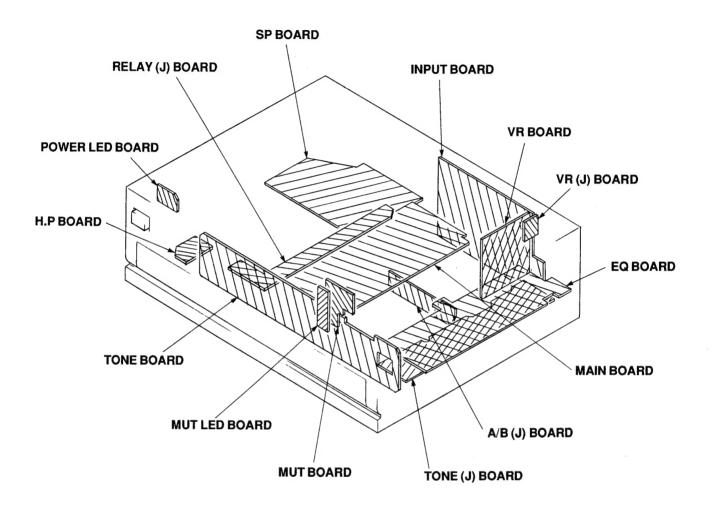

- 1. Connect the digital voltmeter to VH5 on main board as follows.
- 2. Adjust RT301 (L-CL) and RT351 (R-CH) so that the digital voltmeter on signal reads 30mV at VH5.
